

LAB Assignments on APIs

1. Open below URL :

<https://app.beeceptor.com/mock-server/fake-json-api>

you can see below list of GET APIs for testing.

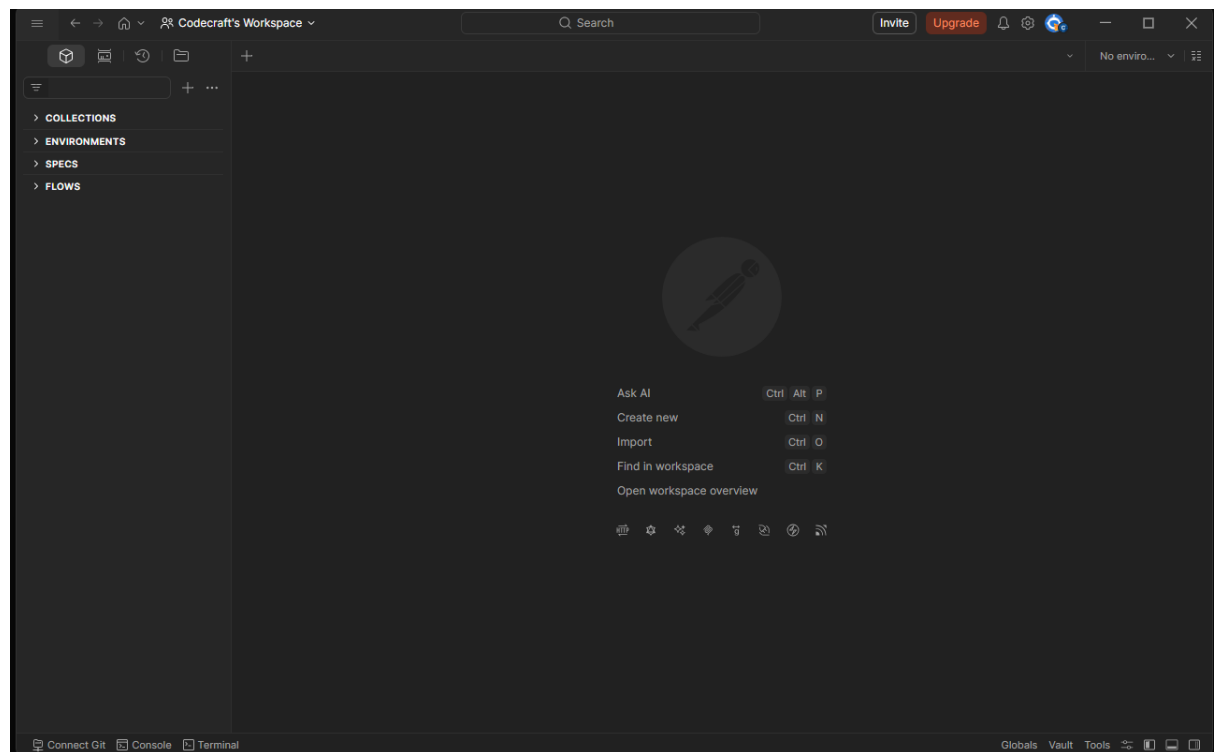

Fake API server is up and running!

Access these mock data endpoints by using the base URL below in your requests.

<https://fake-json-api.mock.beeceptor.com>

 GET <code>/users/{user_id}</code>	Retrieve a user's detail. You get a unique user object everytime. ID remains same as sent in URL.	200 ▼
 GET <code>/users</code>	Generate fake users (names, address, profile photo, phone, etc). Each time you get new user objects.	200 ▼
 GET <code>/companies/{company_id}</code>	Retrieve details about a company by passing company ID. (company-name, market capital, domain, etc.)	200 ▼
 GET <code>/companies</code>	Each time you call this API, you get unique ten company objects.	200 ▼
 GET <code>/customers</code>	Get a list of customers with username, password, full address, created date for an e-comm example.	200 ▼
 GET <code>/notifications</code>	Get a list of notifications to show to a user. You can see find title, message, read status, type.	200 ▼
 GET <code>/</code>	Default response. Responds with the meta information about this endpoint.	200 ▼

2. Open Postman client
3. You will see below

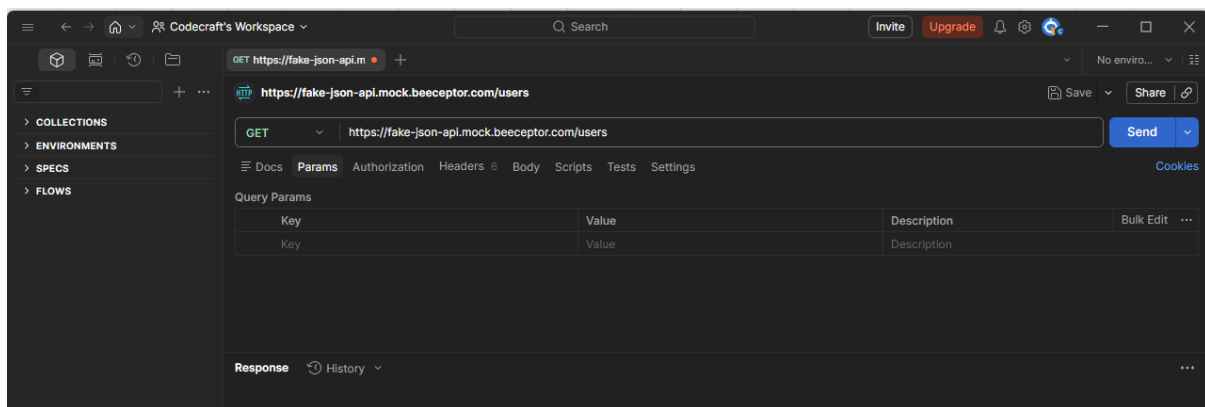

- 4.

Click on + icon for getting form to add api to test

Add the API at the address bar

Above we have provided the GET url and then hit the send button, you can see the response.
